

All about Troy landmarks!

Project by CRE8

TABLE OF CONTENTS

01 About the Project

Summary of how our web app works

03 Technologies

Learn how the technologies we'll implement work

05 Project Schedule

When we plan to finish each part of our app

02 Who do we serve?

Who is the target audience for our app?

04 Features

How do different parts of our app work?

06 Wireframes

What our app will look like

ABOUT THE PROJECT

Our project is called Discover Troy, a web app aimed to help anybody find places in Troy. Our goal is to make it easy to find new restaurants, places, and landmarks to see for people unfamiliar with the area.

Who do we serve?

Troy Residents

Locals can discover new places, or add their own

Troy Visitors

It's hard to find places in somewhere you've never been.

RPI Students

There are students that barely explore places outside of campus

TECHNOLOGIES

QR Codes: Using QR codes makes it easy for people to get quick info about a spot. Scanning the code brings the user to the location's info page.

Maps: Users can click around the web app's map and find spots. Users can pin locations on the Discover Troy's map and provide useful info.

FEATURES

Mobile Friendly

We expect many of our users to use mobile devices and utilizing the QR codes

Browser Friendly

Our web app is to be compatible on major browsers i.e. Chrome, Firefox

Security

Our users accounts are to be secure

Databases

We need databases to store user accounts and other data

Personalized

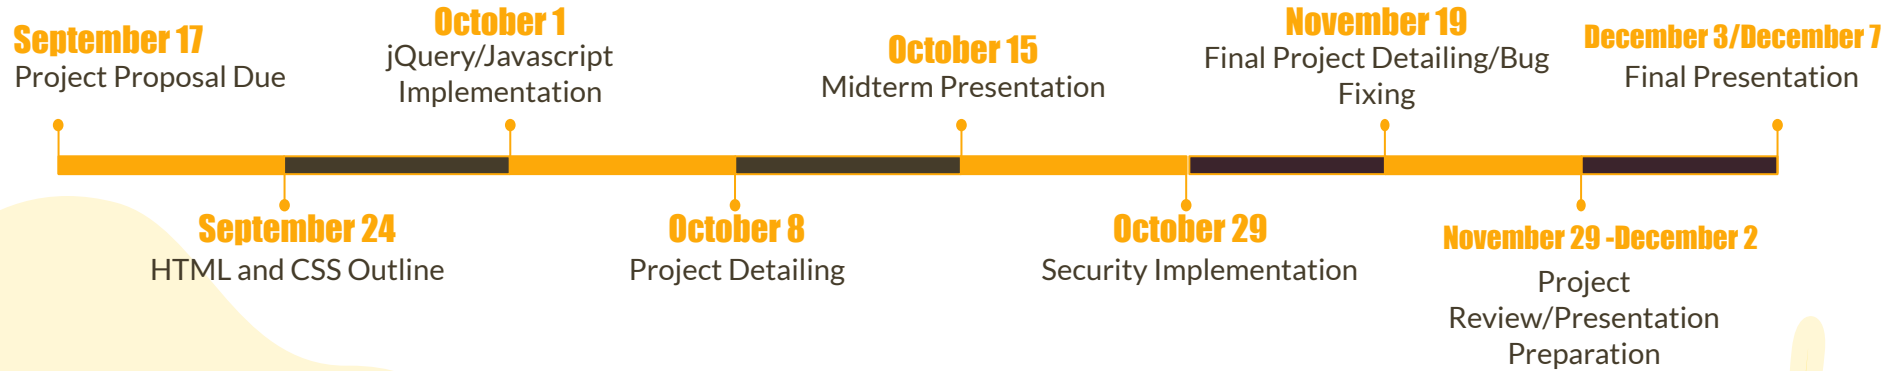

Users can create accounts to save favorite locations

Map

Our web app uses Mapbox to provide the map functionality

PROJECT TIMELINE

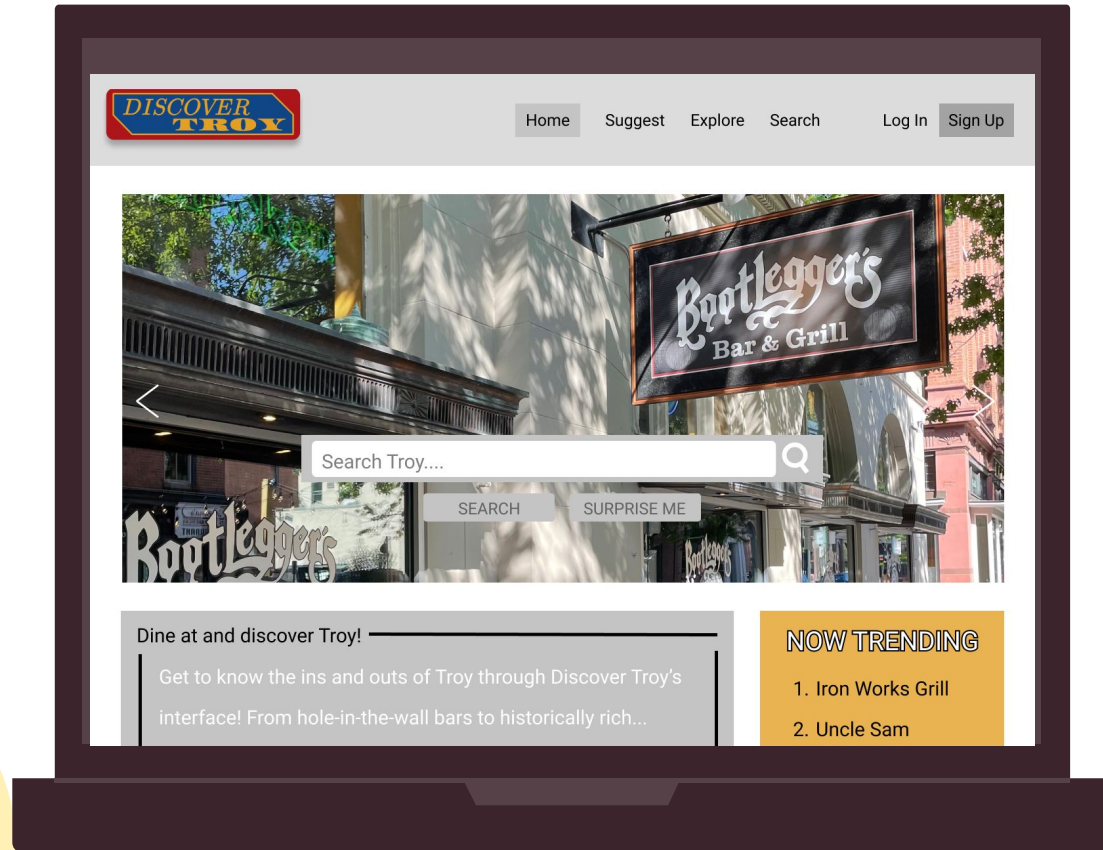

SNEAK PEEK

DESKTOP APPLICATION

Our desktop application will feature a sleek UI to allow for an easy navigation and compatibility across Google Chrome and Firefox.

MOBILE APPLICATION

Mimicking the UI of our desktop application, our mobile app is easily navigated through a phone's browser.
